A Use for Conscious Feedback

Focussed schematic:

AA processors → Events → STM ⟩ sequence of most recent events

Look for useless cycles of thought

Attenuate current process.
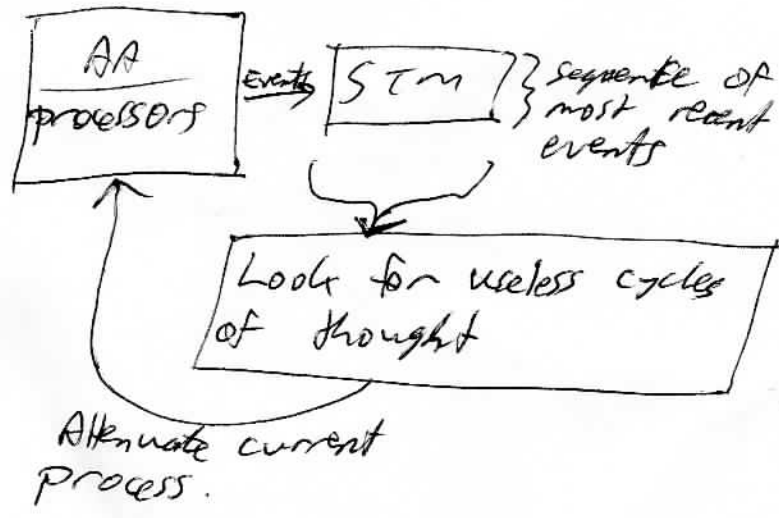

The great gain will be once we can generalise the algorithm so it's not specific to the CF input; but ~~can~~ runs against all inputs.

Detailed

AA

STM

⑤ Attenuate current process.

① Current Thought

② Look for current thought

Cycle Detection Processor

③ chain ~~sequence~~ of thoughts related to current thought → re: the particular mental conversations

④ Rate level of cyclic nature of ~~the~~ conversation.

The reason for detailed C.F. fed back ~~this~~ is as a fully fledged sense, is the level of complexity & advanced meta-thought that is possible.
